

Improve Fruit & Vegetable Quality with **metarex**

- **Long lasting residual snail control** — fewer applications for a low cost program.
- **Exceptional weatherability**—holds up to moisture and rehardens for longer-lasting control.
- **Outstanding pellet uniformity with no dust** for consistent application.

Strawberries

Blackberries

Metarex – for maximum control and improved grade.

*Just one slug or snail can hatch from 50 to 150 eggs – every 4-6 weeks!
The presence of just one slug or snail can quickly turn into a serious problem.*

Metarex 4%* Slug & Snail Bait:

- **Outlasts** – features reduced rate technology for longer control and fewer applications for a low cost program.
- **Highest quality** – food-grade ingredients and our unique manufacturing process promotes maximum feeding.
- **Outstanding palatability and attraction** – promotes early feeding and faster control. Preferred by slugs & snails 3-to-1 over vegetables**
- **Rain & irrigation resistant** – Rainfast for up to 45 days (under normal rainfall) maintaining effectiveness longer and providing control for up to four weeks.
- **Plentiful baiting points** – better coverage and control (snails have to travel less to reach the bait – especially less-mobile juvenile snails).

Feeding damage to vegetables.

Slug damage to tomatoes. Snail damage to greens.

Exceptional Weatherability

Metarex 4%

Other Pellets

*Elapsed time: 16 days, Rainfall 1.6”
Glenn Fisher Oregon State Univ., Corvallis 2005*

Remarkable Uniformity

Metarex 4% | Wet Process

Other Pellets | Compacted Process

- **Exceptional weatherability** – active ingredient is homogeneously blended throughout the pellet - it won't wash off and pellets take longer to breakdown.
- **Save time & product** – more baiting points, lower rates and longer treatment intervals means less bags to store and less frequent reloading of application equipment.
- **Remarkable uniformity***** (no dust) for easier application, more even coverage, less waste, and easy equipment clean-up.

* Metoldehyde
** Carrots and lettuce
*** 96% of pellets are manufactured to within 0.1 mm tolerance; Bulk density = 49 lb/ft³
