

Improve Grass Seed Stand and Yield with metarex

- **Long lasting slug control** — pellets remain effective and provide protection for up to four weeks.¹
- **Rain, irrigation & mold resistant** — Metarex pellets hold their shape longer – rainfast up to 45 days (under normal rainfall).
- **Pellet uniformity with no dust** — highly visible pellets do not shatter and offer more baiting points than the same weight of competing products to help assure consistent application and proper coverage.

Kills Slugs Fast™

tote #80000768

bag #80000767

* Metaldehyde

¹ when pellets remain

Metarex – effective control at reduced rates.

*Each slug can hatch from 50 to 150 eggs – every 4-8 weeks!
The presence of two slugs can quickly turn into a serious problem.*

Metarex 4%* Slug Bait:

- **Lasts long** – features reduced rate technology protecting up to four weeks for an efficient baiting program.
- **Plentiful baiting points** – more than the same weight of competing products (slugs have to travel less to reach the bait – especially less-mobile juvenile slugs).
- **Perfect for blending with bulk fertilizer:** Uniform, hardened, no-dust pellet with bulk density similar to urea*** stays mixed, and holds up to blending and application. Available in 2,000 lb. totes.
- **Less passes over the field:** Metarex can be broadcast from 40-60 ft. with consistent coverage.
- **Reduced rate technology** – fewer bags to store and less frequent reloading of application equipment.

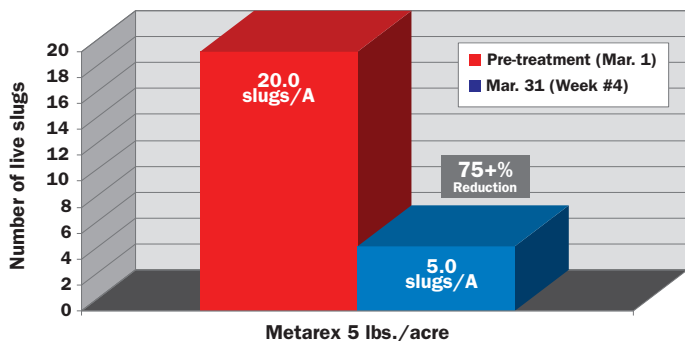

Stand loss from slug feeding

- **High quality = quick attraction** – offers immediate protection to plants. Preferred by slugs 3-to-1 over vegetables**
- **Weatherability** – active ingredient is homogeneously blended throughout the hardened pellet - so they hold their shape a long time.

Metarex provides month-long control at a low rate.

5.3 inches of Rain

*Dr. Glenn C. Fisher PhD. & Denise Gates – Oregon State University
Mulkey Farm, Willamette Valley (4 replications)*

Metarex Weatherability

*Elapsed time: 24 hours
Conditions: Open Petri dish, 20mL water*

*Elapsed time: 16 days, Rainfall 1.6”
Glenn Fisher Oregon State Univ., Corvallis*

Metarex Uniformity

No dust & consistent size*** enables consistent flow, reduced “clogs” & waste and easy equipment clean-up.

*Wet Process Mfg'd.****

*** 92% of pellets exactly the same 2.5mm size <8% variance: 2.4 or 2.6mm; Bulk density = 49 lb/ft³

* Metaldehyde
** Carrots and lettuce
