Website / eRebate

A multi-feed, anticoagulant rodenticide that delivers effective below-ground control, along with several key benefits:

- **Palatable** – Made with winter wheat, combined with the anticoagulant chlorophacinone (0.005%).
- **Moisture resistant** – Can be used in wet soil conditions – does not lose its effectiveness when wet.
- **Waits for the rodent** – When placed in the burrow, the anticoagulant bait is stable; it takes effect after the rodent eats the bait.
- **General-use pesticide** – Does not require a certified applicator's license when used according to label directions.
- **Vitamin K₁ is the antidote.**

Not registered for sale in the states of: AK, HI, NC or PA.
