FOR IMMEDIATE RELEASE

Liphatech Now Offers Resolv® in a Mini Block

MILWAUKEE (May 14, 2025) — Liphatech Inc., a leading provider of pest management solutions including rodenticides, rodent bait stations and IGI Carbon Dioxide™, announces the availability of its rodenticide, Resolv®, in a mini block.

With the active ingredient bromadiolone, invented by Liphatech, Resolv mini blocks offer effective control against roof rats, house mice and Norway rats, including warfarin-resistant Norway rats. It is a competitively priced option for everyday pest management and provides an ideal solution for accounts that require ongoing maintenance and clean-out. Resolv is also available in a soft bait.

“PMPs know what they can expect from Resolv soft bait, and these same benefits can be realized in this new mini block formulation,” said Matt Titshaw, business manager at Liphatech. “As it is our mission to help PMPs, this additional option provides the flexibility to find what works best for each application.”

Offering durability, Resolv mini blocks reduce crumbling and are labeled for indoor and outdoor use as an all-weather bait that can be used in both wet and dry areas. The 1-ounce mini blocks are designed with rodent gnawing edges and a center hole for securing the bait on vertical or horizontal rods in bait stations. According to the label, a lethal dose may be consumed in one night’s feeding, with the first dead rodents appearing 4-5 days after feeding begins.

Along with Liphatech’s entire mini block portfolio, new Resolv mini blocks are available to PMPs via authorized distributors. For information or questions about Liphatech products and services, visit liphatech.com/resolv or call 888-331-7900.
